

Dyllan Alves Cordeiro

AI Engineer | Agentic Systems, LLM Applications & AI Governance

Valparaíso de Goiás - GO (Entorno DF) · dyllanalves@outlook.com · <https://www.linkedin.com/in/dyllancordeiro/> · <https://github.com/dyllan-alves-cordeiro> · <https://dyllan-cybersecurity-portfolio.vercel.app/ai-engineering>

SUMMARY

Founder and full-stack engineer building LLM applications and governed agent workflows. Hands-on work spans server-side model integration, SQL-backed context retrieval, document tools, streaming, MCP and scoped execution. Combines software, data and reliability engineering with earlier technical support and network operations.

CORE SKILLS

AI applications: Server-side LLM integration; prompt and context engineering, SQL briefing retrieval; source-grounded web search; tool/function calling, SSE streaming; usage limits; timeout handling; credits; latency instrumentation

Agent platform and governance: MCP; Coordinator–Executor orchestration; cross-harness dispatch, Execution contracts, short-lived authorization, explicit scope and verifiable returns, Canonical specifications; drift validation; human approval

Software, data and security: Python; TypeScript/Node.js; React; REST APIs; PostgreSQL/SQL, JWT; tenant-aware integrations; PostgreSQL access controls; TLS; server-side secrets

Quality and operations: Unit tests and typechecking; deterministic document validation, Logs and evidence trails; Git; technical documentation; B2B support

PROFESSIONAL EXPERIENCE

Digytron BR | Founder and Full-Stack Engineer (AI projects evidenced in 2026) | 2019 - Present

- Developed Lecion LLM workflows with JWT authentication, user-scoped SQL briefing retrieval, SSE responses, plan-based limits, credits, timeouts and failure refunds.
- Implemented document/PDF reading, deterministic validation and edit-proposal tools, requiring human acceptance before applying changes.
- Built an internal governance platform with an MCP server, tool contracts, reading and role gates, short-lived authorization and explicit scope within the platform runtime.
- Designed Coordinator–Executor orchestration and cross-harness dispatch with structured envelopes, pre-execution admission, scope-collision checks and returns linked to validation and Git evidence.
- Turned specifications and documentation into verifiable contracts through canonical sources, narrative-drift detectors and positive/negative tests for authorization, traceability and redaction.
- Developed tenant-authenticated Space/OS integrations, server-side secrets and assisted-reply modes; implemented a restricted PostgreSQL metadata gateway with Bearer authentication and TLS verify-full.

Onitel Telecom | IT Analyst | 2024 - 2025

- Full-time, on-site IT analyst at a telecommunications provider.

Reitec | Systems Analyst | 2023 - 2024

- Full-time systems analyst working with Python and HTML5.

Stefanini Group | B2B Technical Support - Caixa Econômica Federal project | 2021

- Provided B2B technical support for Caixa Econômica Federal.

AGE Telecom | Premium Technical Support | 2021 - 2022

- Provided in-person customer service and premium technical support.

SKILL.NET | Technical Support and Network Operations | 2018 - 2021

- Provided technical support and network operations for internet customers, with troubleshooting, guidance and follow-up through WhatsApp and telephone.

EDUCATION

UNIDESC | B.S. in Information Systems | 2015 - 2019
